

*UPDATE Command is used to update data in a tables*

### UPDATE Command

```
UPDATE `table_name` SET `column_name` = `new_value` [WHERE condition];
```

#### Things to note

- **Updates have to be done one column at a time**
- **Where clause is used to select the rows on which we want to do the updates**
- **If the where clause is not used it will set all rows of `column\_name` to `new\_value`**
