

- LOCAL vs NON-LOCAL
 - LOCAL - file is present on client host.
 - NON-LOCAL - file is present on server host.
- We will be using LOCAL option.
- Load local data command :-
 - load data local infile "/home/avadmin/Desktop/SQL_Course/UserDetails.csv" into table UserDetails columns terminated by "," optionally enclosed by "" ignore 1 lines;
- You will run into error :-
 - ERROR 3948 (42000): Loading local data is disabled; this must be enabled on both the client and server sides
- To turn on loading local data from server side :-
 - sudo mysql --local-infile=1 -u root -p
- To turn on loading local data from client side :-
 - show global variables like "local_infile";
 - set global local_infile=1;
