

- Using outfile directly we get an error :-
 - `select * into outfile "/home/avadmin/Desktop/fifa_project.csv"`
fields terminated by "," optionally enclosed by "" lines
terminated by "\n" from players;
 - ERROR 1290 (HY000): The MySQL server is running with the
--secure-file-priv option so it cannot execute this statement
- The `secure_file_priv` variables in security feature used by mysql
server host.
 - If it is empty, then the server places no restriction on the import
or export.
 - If it is set to a directory value, then the server only allows import
or export to or from the directory.
 - If it is set to NULL, then the server does not allow import or
export.
- Following will show the path of the directory where you can export
your file :-
 - show variables like "secure_file_priv";
- Select the output directory :-
 - `select * into outfile "/var/lib/mysql-files//fifa_project.csv"` fields
terminated by "," optionally enclosed by "" lines terminated by
"\n" from players;
